To whom it may concern:

Reference: Use of *SEALECTION*<sup>®</sup> 500 against the underside of the roof deck.

The use of *SEALECTION*<sup>®</sup> 500 against the underside of the roof sheathing in an unvented application has long been validated as an extremely beneficial method of gaining energy efficiency in the structural envelope. Our applicators have a great amount of experience in the use of the foam against various substrate materials including asphaltic felt material. This empirical data is based on nearly two decades of use without any problems including adhesion or migration of chemicals between the substrate material and the foam. Demilec approves the application of our foams against the asphaltic felt material.

Please feel free to contact me if I can be of further assistance.

Thank you,

A handwritten signature in blue ink that reads 'Charles Waggoner'. The signature is written in a cursive style and is set against a light green rectangular background.
